Oak Tree Storage Online/Offsite Backup

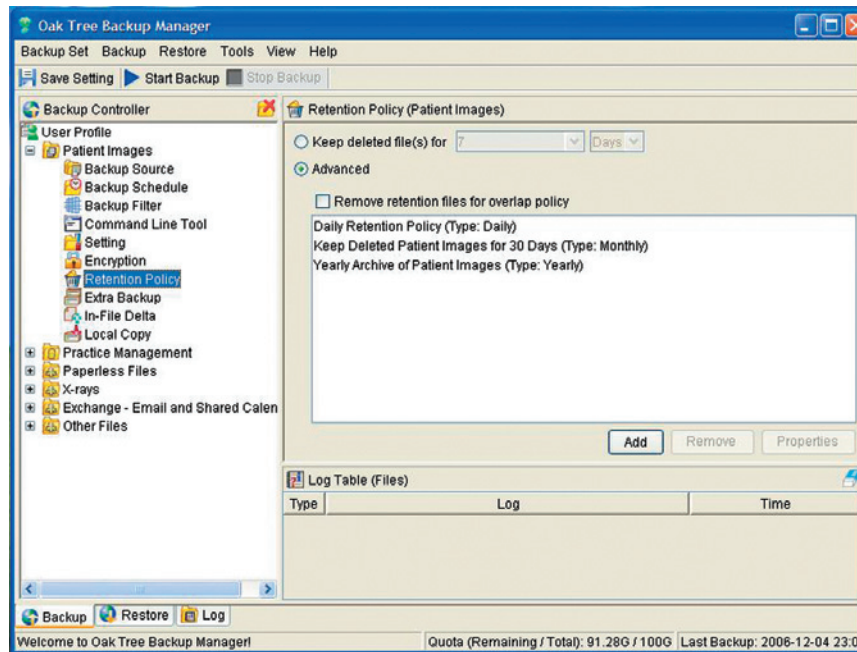

Rooted in reliability

Offsite backup provides secure, state-of-the-art technology to keep files safe and accessible

Information provided by Oak Tree Storage LLC

With emphasis on security and reliability, **Oak Tree Storage Online/Offsite Backup** provides the optimal configuration settings for all data types, retention schedules, and frequencies. Based on the company's experience with dentists, orthodontists, oral surgeons, and almost every type of medical and dental practice throughout the United States, it has created a standard, familiar interface that, once configured, runs fully automatically on every computer and server on which it is installed and updates itself automatically.

The system maintains multiple redundancies in its data center, including power, equipment, Internet bandwidth, access, and availability, as well

as environmental monitors and controls to ensure that customer data is accessible whenever it is needed. **DPR**

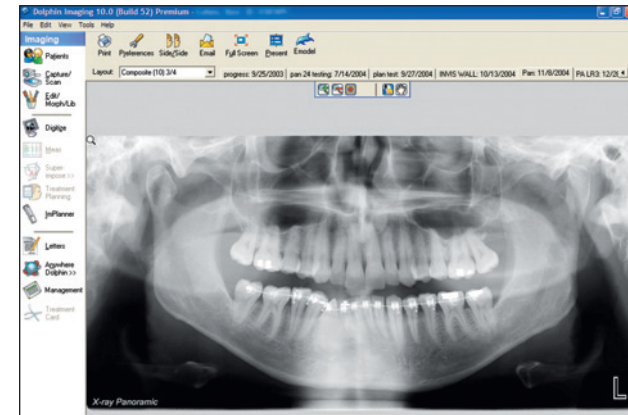

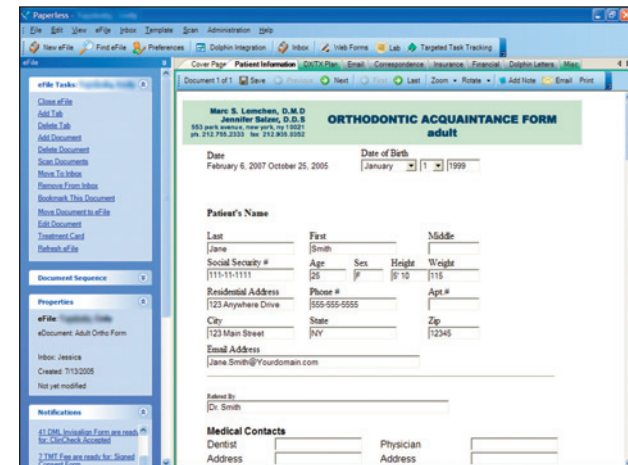

Image ready You may not know that you've lost a patient's images until it's too late. To prevent this from happening, the backup system offers an extensive array of Retention Policies, which include long-term backup retention—up to 100 years—for files/folders you can specify.

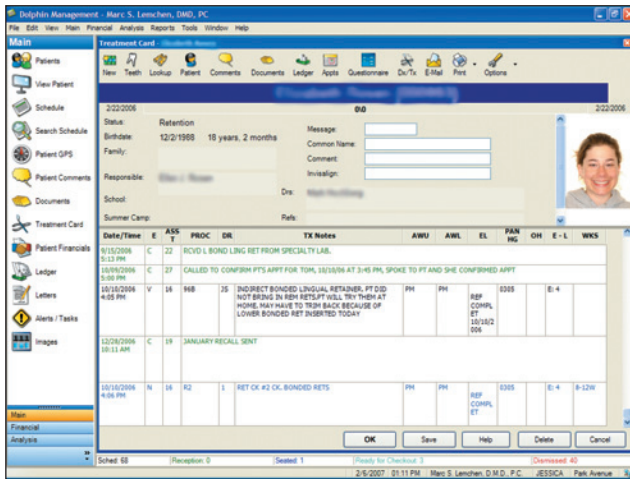

Insured and secured For fully digital offices and those utilizing scanning technologies, the backup system provides a secure offsite “insurance policy” for your practice that far surpasses the capabilities of tapes, disks, CDs, or other media. In addition, all data is encrypted with the same secure, individualized HIPAA-compliant methods utilized by banks, hospitals, and even government intelligence agencies.

Oak Tree Storage Online/Offsite Backup

Customized calendar Files that change constantly always need backup, but do not require long-term retention; files that never change do require long-term retention. This highly flexible system allows for daily, weekly, monthly, quarterly, and/or multiple periodicities retention policies, as well as unlimited backup frequencies for each backup set—both overlapping and non-overlapping—for as many of each frequency as necessary.

Additional information

- Automatic summary reports for quick verification
- Reminders to run backups each time a scheduled computer reconnects to the Internet
- Customer service and technical support teams available to help by phone or e-mail at any time
